&
HANDLING**

MARKING ROUND TPAK CARTRIDGES

Always store TPAK cartridges in the Mylar packaging in a dry, climate controlled environment between 50°F and 75°F.

Do not remove TPAK cartridges from the Mylar packaging until ready for use.

Marking TPAKs are recommended for indoor use. If you wish to use marking TPAKs outdoors, please note that you may experience a degradation in performance after TPAKs have been removed from the Mylar bags for one hour, or if training in conditions where temperature exceeds 80°F or relative humidity exceeds 70%. Prolonged exposure to extreme heat or humidity will have a negative effect on marking TPAKs.

TPAK cartridges are 100% recyclable and should be discarded after use.

Never attempt to reload or reuse the Marking Round projectiles.

Always remove the orange breakaway tab before closing the magazine.

Only use TPAK cartridges with the UNIT4 Training Rifle.

WARNING: READ AND FULLY UNDERSTAND THE OPERATOR'S MANUAL BEFORE OPERATING ANY UNIT4 TRAINING SYSTEM
